

Instructions for De-Scaling your Keurig Mini Personal Brewer

Step 1:

Make sure you have at least 8 ounces of undiluted white vinegar on hand. You will also need a 10 oz ceramic cup (do not use a paper cup) and access to a sink.

Step 2:

Fill hot water tank with 8 ounces of undiluted white vinegar up to the FILL LEVEL mark, place a ceramic cup on the drip tray.

Step 3:

Close the lid, and perform a brew into the ceramic cup without adding a K-Cup®.

Step 4:

Pour the contents of the ceramic cup into the hot water tank, careful the liquid will be hot, close the lid. Start a brew but power off the brewer just after it starts to dispense and then allow it to sit for at least 30 minutes.

Step 5:

After the prescribed period of time, perform a brew without adding a K-Cup®. Empty the contents of the ceramic cup into the sink. Be careful as contents may be hot.

Step 6:

Fill the hot water tank with 8 ounces of bottled water, close the water fill lid, place a cup on the drip tray and perform a brew.

Step 7:

Repeat Step 6 three times using bottled water (with no K-Cup in place) to cleanse the brewer plumbing and get rid of any residual taste from the vinegar.

The brewer is now ready for normal use again.
